SAFETY SECURITY PROTECTION

What we do

We provide all of the elements you need for a risk free environment. Our access control and CCTV systems offer the convenience of installation, billing and maintenance, from a single point of supply.

Our exemplary service, combined with our broad range of hardware, ensure our clients' exact project requirements are delivered. From initial specification, to supporting your demands as your company grows, we are committed to providing an outstanding service to our customers.

Our service incorporates an in-house team of professionals, who can conduct an impartial audit, to find the best access control and CCTV systems for you. We will analyse your specific requirements and provide a system that perfectly fits your specification, rather than recommend a system that suits our range.

By offering a wide spectrum of flexible solutions and an optional bespoke design service, we guarantee to meet your project requirements.

Access Control

Benefits by user

Our access control systems offer a secure, flexible, convenient, and cost-effective way of reducing risk and energy.

Facilities Manager

Part of your duty will be to ensure that your organisation has the most suitable working environment for its employees at the lowest cost possible. Access control makes your job easier by enabling you to:

- Automate buildings for smart, low energy environments
- Allow temporary access for visitors and maintenance
- Produce audit trails & automated reports
- Help enforce health and safety at work

Security Manager

Knowing who is allowed where and when within a building can be extremely hard without the help of technology. Access control does the job for you, through:

- The assignment of access privileges by individual, such as the Caretaker, who will need access to most areas of the building, versus IT staff, who can be granted access to the server room.
- Linking to third party databases, such as HR records, for reduced administration

Occupants and Visitors

Improve the working environment of your organisation's employees, whilst assured in the knowledge they are safe and secure by:

- Automating car parking via automatic number plate recognition, for fast, verification of staff and visitor car parks
- Increasing ease of administrating visitor access privileges
- The ability to link to BMS air conditioning and lighting for comfortable, low cost environments
- Removing the cost of lost keys and replacement locks

Administrator

Access control eliminates the need for paperwork and unnecessary administration.

Other key benefits include:

- Workforce management
- Payroll efficiency
- Remote system access
- Integrated solutions

A range of solutions
to meet your requirement

We offer solutions that cater for a single door dental surgery, right up to an entire enterprise, with thousands of doors and multiple sites, each with their own bespoke requirements.

This is achieved by providing three different methods of access control, all of which can control doors in single buildings, or across multiple buildings and locations.

2. PC-based access control

These systems may be used to control any quantity of doors in a building and offer central control, via a network. Access is gained by using one, or a combination of authentication methods, including a numeric code, or PIN with a keypad, proximity cards, smart cards or biometrics.

A key benefit of this type of system is its flexibility, which enables you to grant different permissions for individuals or groups of users via a rich and intuitive user interface. Many systems allow control of additional buildings via existing LAN/WAN. PC-based systems can also control other services within buildings, such as, intruder alarms, fire doors, lifts and lighting.

Key benefits

- Full control across all entrance points from one PC
- Unlimited capacity for a growing organisation
- One update for all locations, to reduce administration

Typical applications

- Medium/large corporate premises
- Multiple-site premises
- Government buildings
- Universities

PC-based systems are great for medium to large sites, as they allow for the management of large quantities of doors and users. Integration into lighting and HVAC is possible, which reduces the use of energy in unoccupied areas. Muster reports can also be generated, which are sent directly to the Fire Marshall's smart phone in the event of a fire.

1. Standalone access control

Access is gained by using one, or a combination of authentication methods, including a numeric code, or PIN with a keypad, proximity cards and smart cards. Standalone access control provides wireless, wide-area networking for single, multiple and even remote facilities and doors.

Key benefits

- No internet connection required
- Unlimited expandability
- Easy to use
- Low cost

Typical applications

- Small business premises
- Any small or medium-sized site requiring access control

Standalone systems are great for smaller sites with a relatively small number of users. The system can be extended easily as your requirements change, and token management is simple.

3. Offline locks

Safetell's range of offline locking solutions are designed for wide area networks that may not have network connectivity. Their unique code key design enables the best protection against lost/stolen keys, as it can only be used if the PIN is entered on to the key before usage. Not only does this provide added security, but means it can also function as a time and attendance system, by providing information on who goes where and when and how long they stay there for.

Key benefits

- As keys are impossible to copy, pick or bump, dependence upon security guards can be reduced and unauthorized access is eliminated
- Ability to monitor how long users have spent on site, giving you a complete overview of billable hours
- Downtime is reduced - staff can go directly to a job site, meaning no more time/energy/money wasted in collecting / returning /managing keys
- Time, energy, and money is saved when keys are lost/stolen/misplaced or copied, by eradicating the need to change locks

Typical applications

- Public utilities
- Telecoms masts
- Railways
- Motorway networks

This advanced access control system is great for small remote sites with a high number of users. The system is extremely responsive, allowing you to add/edit/delete users from the system, in real-time, with the click of one button on the software.

CCTV

CCTV is much more than a means of detecting intrusion, it can also support health and safety policies by recording all accidents, enabling incidents to be investigated and reported.

Our range of CCTV solutions can be engineered to suit any budget, as camera type and recording requirements may be dictated by need.

Key benefits

- A great deterrent
- Staff protection
- Reduction of fraudulent insurance claims
- Enabling remote security
- Reducing dependency upon manned security
- Invaluable tool for investigation

Benefits by user

Facilities Manager

Part of your duty will be to ensure that your organisation has the most suitable working environment for its employees and their activities. CCTV makes your job easier by:

- Helping you deliver a safe and secure environment for your clients
- Providing full visibility of the building
- Monitoring health and safety at work

Occupants and Visitors

Improve the working environment of your organisation's employees whilst assured in the knowledge they are safe and secure by:

- Monitoring visitors in line with access privileges
- Automating visitors' access to car parks by integrating ANPR
- Offering audit trail for occupants

Security Manager

Investigating incidents can be extremely hard without the help of technology. CCTV provides invaluable assistance by:

- Highlighting threats quickly
- Enabling you to make informed decisions & provide a response in a timely manner

We offer three types of bespoke CCTV solutions:

Whilst all of our solutions come with the ability to view from remote devices, there are key features designed to suit individual needs:
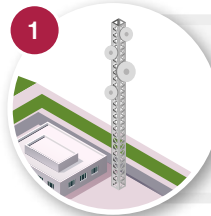

Solution	Typically used	Benefits
HD-SDI	Suitable for high end projects where the main requirements of the system are a high resolution, live video.	Higher output video transitioning, enables clearer identification, with the ability to upgrade your system without rerunning coax cables.
IP	Ideally suited to larger projects where a building's existing POE infrastructure can be utilised to reduce installation time and cost.	Cost savings are made by eradicating the need for the installation of electrical power cabling.
Analogue HD	Appropriate for large buildings and those requiring upgrades from standard analogue systems, who require a greater level of detail.	A simple, low cost, zero latency solution that provides the potential to utilise pre-installed cabling, for cost and time savings.

Our installation and service provision is through a nationwide network of directly employed technicians who are BS7858 security vetted.
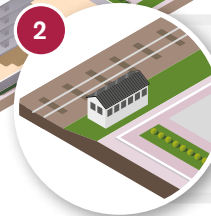

Other benefits of choosing Safetell, include:

- Free advice and surveys for new and existing systems
- Bespoke design of CCTV systems to meet client requirement
- Optional service and maintenance contracts

Typical buildings that can benefit from our systems

Building: Telecoms Mast
Product: Remote access offline locks
Benefit: Full Audit trail

Building: Rail network/signal box
Product: Remote access offline locks
Benefit: Team tracking productivity

Building: Sub station
Product: Remote access offline locks
Benefit: Lost keys, replacement padlocks, full control of access to site, time and attendance monitoring

Building: Office
Product: Access control
Benefit: Multi tenanted offices, with segmented control

Building: Doctor's surgery
Product: Access control
Benefit: Reducing administration for staff with customisable reports

Building: Data Centre
Product: Access control /CCTV
**Benefit:** Supporting/ensuring correct access by individuals, monitoring support for operation

Building: School
Product: Access control /CCTV
Benefit: Ensuring the safety of pupils and control of who enters the building

Building: Bank
Product: CCTV /access control
Benefit: Deter threats, acts as a deterrent and enables investigation of incidents

Building: Shop
Product: CCTV
Benefit: Identify and prosecute thieves

Building: Car Park
Product: CCTV (Automatic Number Plate Recognition)
Benefit: Ability to view and control who enters and exits the premises

The Safetell difference

We are committed to providing an outstanding service to our customers. While manufacturers' support ends once the system's guarantee expires, as service providers, our support can continue for as long as you require.

With 24 hour helpdesk services, centralised account management, and national support, we can develop additional solutions as your company grows, all through a single account manager.

Free advice and surveys for new and existing systems are provided, so our experienced security vetted staff can assess whether alterations can be made to your current hardware, before the expense of a brand new system is considered.

Harmonious installation guarantees minimum interference. This is why our technicians ensure that our systems are installed utilising existing infrastructure, to reduce disruption and cost.

Project Management – what happens next

1. System Design
We offer a bespoke system design service and specification of product.

2. Order and Installation
All products are Safetell supplied and are fitted on site by our security vetted technicians.

3. Training
Instruction is provided on how to make the most of the system.

4. Technical and On-Site support
A 24/7 helpdesk is provided for any queries, with on-site support available.

5. Maintenance Contracts
We are happy to provide competitive maintenance contracts for all solutions.

Key benefits

- An exemplary service, combined with a large range of products
- Impartial audit for best solution
- A range of solutions on offer to suit project requirements
- Certified to the standards of ISO 9000
- NSI Security approved & NACOSS Gold accredited

UKAS MANAGEMENT SYSTEMS 120
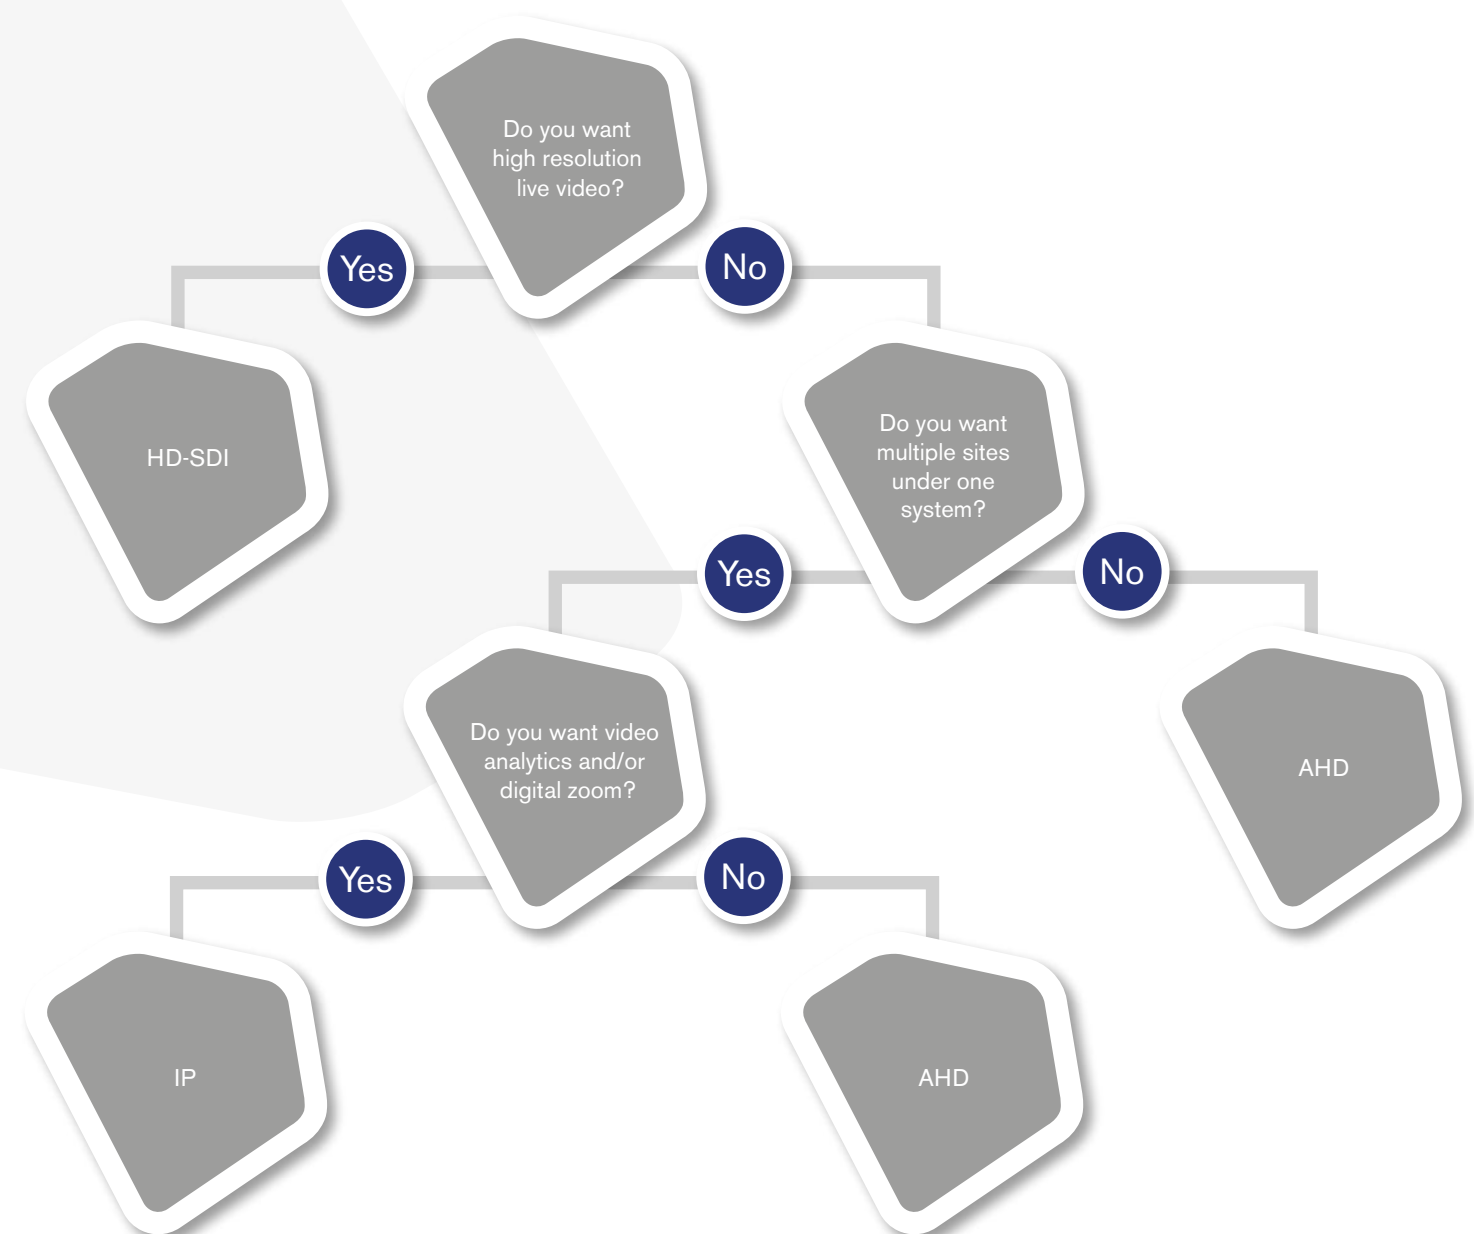

A seamless approach to a perfect solution

A bespoke service & solution

Our in-house professional service team can conduct an impartial audit, to find the best access control and CCTV systems for you. Your specific requirements are analysed and matched to a devised solution. The result? A system that perfectly fits your specification.

Which Access Control System is right for me?

Do you require remote site access control?

Yes → Mechatronic key based Access Control

No → Do you want PC based control?

Yes → Do you want to integrate other systems? E.g. CCTV, Fire Alarm?

No → Stand Alone Token/Card/Keypad

Yes → Advanced Enterprise Access Control Solution Token/Card/Biometric

No → Basic Professional Access Control Solution Token/Card/Biometric

Which CCTV System is right for me?

Do you want high resolution live video?

Yes → HD-SDI

No → Do you want multiple sites under one system?

Yes → Do you want video analytics and/or digital zoom?

No → AHD

Yes → IP

No → AHD

Whether you are looking to install an access control system, or roll out CCTV across your estate, we have the solution that will suit the threats posed and the budget available.

Head to:

www.safetell.co.uk where we will be able to provide you with a no obligation, impartial security audit.
