

# PROJOLLY SQUARE

ANODISED AND POLISHED ALUMINIUM

PJQ... 045		H 4,5 mm
PJQ... 06		H 6 mm
PJQ... 08		H 8 mm
PJQ... 10		H 10 mm
PJQ... 11		H 11 mm
PJQ... 125		H 12,5 mm

## EXAMPLES AND INSTRUCTIONS FOR LAYING METHODS

1. Choose a PROJOLLY SQUARE height corresponding to the thickness of the covering/floor. 2. Apply the adhesive in the area that the square is being applied. 3. Rest and line up the square, cut to the required length, pressing the perforated tab into the adhesive. 4. Place the tiles lining them up so that the upper part of the square meets with their edge. 5. Fill the contact area between square and tile completely with adhesive to prevent the accumulation of water in the empty spaces.  
**IMPORTANT:** Pay attention to the external edges of the aluminium Projolly square. They must be protected against agents such as adhesives and sealants and against grinding or scraping actions.

**PROJOLLY SQUARE** is a square shaped as a right angle that is versatile and suitable for various laying solutions, both for floors and coverings. It is used as a staff angle for external corners of tile coverings. It facilitates laying and eliminates the brittle unpredictability of ceramic tiles. It is also used as a finishing square for finishing wall coverings, raised platforms, steps, and baths, and is used as an edge and a skirting board for parquet, natural stone, moquette and epoxy resin coverings. It guarantees flawless work done with care that is of great aesthetic merit. It strengthens tile edges with a square finish, protecting corners efficiently, avoiding chipping and breakages resulting from knocks. This is required by the new European regulations on safety and accident prevention in public and private places.

**ANODISED ALUMINIUM thermo packed (silver-copper-titanium-black)**  
bar length 2,7 LM - packaging 40 Pcs - 108 LM
